

VECTOR ASSIGNMENT

Shristy Sharma (EE22BNITS11001)

1 PROBLEM 1

1. If either vector $\mathbf{a}=0$ or $\mathbf{b}=0$, then $\mathbf{a}^\top \mathbf{b} = 0$. But the converse need not be true. Justify your answer with an example.

SOLUTION:

Let,

$$\mathbf{a} = \begin{pmatrix} 1 \\ 1 \\ 1 \end{pmatrix} \quad (1.0.1)$$

$$\mathbf{b} = \begin{pmatrix} 1 \\ 1 \\ -1 \end{pmatrix} \quad (1.0.2)$$

$$\mathbf{a}^\top \mathbf{b} = \begin{pmatrix} 1 \\ 1 \\ 1 \end{pmatrix}^\top \begin{pmatrix} 1 \\ 1 \\ -1 \end{pmatrix} \quad (1.0.3)$$

$$= \begin{pmatrix} 0 \\ 0 \\ 0 \end{pmatrix} \quad (1.0.4)$$

Here, $\mathbf{a} \neq 0$ and $\mathbf{b} \neq 0$

Therefore, the converse need not be true.
